

Industrial Internship
Report on "Banking System"
Prepared by
[Abirami R]

This report provides details of the Industrial Internship provided by upskill Campus and The IoT Academy in collaboration with Industrial Partner UniConverge Technologies Pvt Ltd (UCT).

This internship was focused on a problem statement provided by UCT.

We had to finish the project including the report in 6 weeks time.

My project was about the Banking System using the Java programming language.

It allows the user to create a account with the help of the user id and password.

Operations like withdrawl or deposit can be done.

It also displays the history of transaction and the balance amount present in the account.

It provides a unique account number for the users.

This internship gave me a good opportunity to get exposure to Industrial problems.

It was an overall great experience to have this internship opportunity.
